💻 SKILLS

Web Technologies

- JavaScript (ES6+), TypeScript
- React, Vue.js
- Tailwind CSS (v4), SASS/SCSS, CSS3, HTML5
- Responsive and mobile-first UI and UX components
- Accessibility-conscious UI (WCAG-focused mindset)

Backend & Cross-Platform

- Node.js, Molecular (microservices)
- MongoDB, IBM Cloudant, CouchDB
- REST API design & integration
- Flutter (mobile & desktop, Android / Windows kiosks)

Tools & Practices

- Git, GitHub, GitLab
- GitHub Pages, GitHub Actions
- Code review, pair programming
- CI/CD and collaborative workflows (Git-based)

Soft Skills

- Mentoring and supporting junior developers
- Clear communication in international remote teams
- Strong ownership, adaptability, and continuous learning

📄 SUMMARY

Junior Web / Full-Stack Developer with experience building responsive web and mobile applications using JavaScript, TypeScript, React, Vue.js, SCSS, Tailwind v4 and Flutter in real business contexts (POS systems, ordering apps, kiosks). Started out in Nursing and then moved into software to help more people through technology, bringing with me calm under pressure, structured thinking and strong empathy for end-users.

I worked both in small product teams and in large international remote groups, focusing on clean, maintainable code, accessibility-conscious UIs and incremental delivery.

I'm currently looking for junior roles focused on professional growth, ideally in product-oriented teams.

📁 EXPERIENCE

Sellogic - H.Pierre

Full-Stack Software Developer

04/2024 – 05/2025 | Perugia, Italy

- Migrated a legacy Node.js POS system to a newer Node.js version and introduced Molecular framework for microservices, replacing a manual, command-driven setup with a more structured and maintainable architecture.
- Modernised the Cash System frontend in Vue.js and SCSS, refreshing the visual design, adding a dark mode and ensuring consistent behaviour across different screen sizes and devices.
- Trained a team of 4 developers on Flutter from scratch so they could then be hired to build, together, a restaurant ordering system, a kitchen monitor and kiosk terminals, all connected to the same Molecular-based backend we had been working on.
- Worked closely with stakeholders in an agile setup, clarifying requirements and planning sprints, to ensure we built the right features before investing development time

Tech stack: TypeScript, JavaScript (ES6+), Vue.js, SCSS, Flutter, Node.js, Molecular, API REST, MongoDB, CouchDB, IBM Cloudant, Postman, Apidog, Git, GitLab, GitHub, Android Studio (ADB), Jira, Trello, Slack, Miro

10odevs

Frontend Software Developer

10/2020 – 02/2024 | Los Angeles, CA, USA (Remote)

- Collaborated in a large international remote team (100+ developers) to build modern, responsive web applications following agile methods and industry best practices.
- Built reusable UI components with HTML5, CSS3 and vanilla JavaScript (ES6+), focusing on both performance and accessibility, using mobile-first responsive design.
- Participated in daily code reviews, pair programming and Git workflows (branches, pull requests), sharing knowledge and maintaining code quality.
- Took part in weekly sprints, stand-ups and retrospectives, learning to ship value in small, iterative increments instead of waiting for "perfect" releases.

Tech Stack: HTML5, CSS3, JavaScript (ES6+), React, Node.js, Express.js, MongoDB, API rest, Agile/Scrum, Responsive Design, Git, GitHub

Keywords Studios

GBTN Member (Gaming & Tech Network)

08/2020 – Present | Remote

- Active member of a global gaming and tech community where I network with professionals in game development and software engineering.
- Participate in discussions and events around game design, player experience and new technologies.

Tech Stack: Python, Charles Proxy, RTSS, OBS Studio, Android Studio (ADB), Selenium, Appium, Splunk, TestRail

German A1 (Basic, currently learning)	● ● ● ● ●

🏠 AVAILABILITY

Immediate availability

Open to relocation

Authorized to work in EU

★ SELECTED PROJECTS

Noctis Aenigmata (Night's Enigmas)

Dark Situational Puzzles Game

Noctis Aenigmata (from Latin: "Night's Enigmas") is a small Flutter mobile game inspired by short horror stories, designed for 2+ players where one player knows the hidden solution and others reconstruct the story by asking yes/no questions.

- Loads puzzle content from JSON to make it easy to expand and maintain.
- Supports Italian and English, with an architecture ready for additional languages.
- Uses structured navigation, a custom dark theme with gradients and subtle animations, and layouts that adapt to different screen sizes. Puzzle solutions are revealed through a dedicated dialog.

GitHub: https://github.com/Satik37/noctis_aenigmata 

Tech Stack: Flutter, Dart, JSON, Android Studio (ADB)

Personal Portfolio

satik37.github.io

My developer portfolio site built with React, Vite and Tailwind CSS v4 (the new version). Deployed on GitHub Pages.

- Used as a playground for modern frontend tooling, layout experiments and visual design iterations, kept up-to-date as new projects and ideas are added

GitHub: github.com/Satik37/satik37.github.io 

Live: satik37.github.io 

Tech stack: React, Vite, Tailwind CSS v4, Lucide React, GitHub Pages, GitHub Actions, GoatCounter, EmailJS

🎓 EDUCATION

Bachelor's Degree in Nursing Science (Incomplete)

Università degli studi di Perugia

2016 – 2020 | Perugia, Italy

Transferable skills: managing stress in high-pressure environments, communicating clearly with colleagues and end-users in very different emotional states, working in multidisciplinary teams, solving problems quickly when there is no time to waste, and working with complex information systems under pressure.

BLS-D Certification for Healthcare Professionals

Università degli studi di Perugia - Italian Resuscitation Council (IRC) - 2019

Scientific High School Diploma

Liceo Scientifico G. Galilei

2014 | Perugia, Italy

🔑 HOBBIES & INTERESTS

- Miniature painting and static modelling (precision and detail-oriented work)
- Gaming and game design, with strong interest in game mechanics and player experience
