🛠️ SKILLS

Web Technologies

- JavaScript (ES6+), TypeScript
- React, Vue.js
- Tailwind CSS, SASS/SCSS, CSS3, HTML5
- Responsive and mobile-first UI and UX components
- Accessibility-conscious UI (WCAG-focused mindset)

Backend & Cross-Platform

- Node.js, Moleculer (microservices)
- REST API design & integration
- Flutter (mobile & desktop, Android / Windows kiosks)

Tools & Practices

- Git, GitHub, GitLab
- Code review, pair programming
- CI/CD and collaborative workflows (Git-based)

Soft Skills

- Mentoring and supporting junior developers
- Clear communication in international remote teams
- Collaboration within large, distributed engineering groups
- Strong ownership, adaptability, and continuous learning

📄 SUMMARY

Junior Web / Full-Stack Developer with experience building responsive web and mobile apps using JavaScript, TypeScript, SCSS and Flutter.

I originally studied Nursing but later I realized that through technology I could reach and help far more people than I ever could in a single ward.

That shift changed everything for me.

Since then I've been learning web technologies, working on real business systems and POS tools, and collaborating with international teams in agile setups.

Right now I am focused on growing and deepening my skills in React, TypeScript and large-scale web applications, and I'm genuinely motivated to do that in a structured environment like Vinted Engineering Academy.

I speak Italian, Lithuanian, English C2 and Russian C2.

My years in healthcare taught me how to stay calm under high pressure, work well with different people, and keep proper focus and priorities when things get really hard.

🧰 EXPERIENCE

Sellogic - H.Pierre

Full-Stack Software Developer

04/2024 – 05/2025 | Perugia, Italy

- Together with two other developers, started migrating an old Node.js POS system to a newer version of Node.js and introduced Moleculer framework for microservices along the way, replacing a setup that required a lot of manual terminal commands with something much more structured and easier to maintain.
- Worked on the frontend of the Cash System interface using Vue.js and SCSS, refreshing the visual design, improving the UI, and adding a new dark mode version, adjusting things until the experience felt consistent across different screen sizes and devices.
- Trained a team of 4 developers on Flutter from scratch so they could then be hired to build, together, a restaurant ordering system, a kitchen monitor and kiosk terminals, all connected to the same Moleculer-based backend we had been working on.
- Worked closely with stakeholders in an agile setup, clarifying requirements and planning sprints, mostly to make sure we were building the right things before we built them.

Tech stack: TypeScript, JavaScript (ES6+), Vue.js, SCSS, Flutter, Node.js, Moleculer, Git, GitLab, GitHub

10odevs

Frontend Software Developer

10/2020 – 02/2024 | Los Angeles, CA, USA (Remote)

- Worked in a large international remote team (over 100 developers) to build modern and responsive web apps following agile methods and industry best practices.

🌐 LANGUAGES

English

C2 (Fluent)

Italian

Native

Russian

Native

Lithuanian

Native

German

A1 (Basic, currently learning)

🏠 AVAILABILITY

Immediate availability

Open to relocation

Authorized to work in EU

- Built reusable UI components with HTML5, CSS3, and vanilla JavaScript (ES6+), trying to keep things both performant and accessible at the same time. Used mobile-first responsive design so that layouts could work well across desktops, tablets and mobile devices.
- Participated in daily code reviews, pair programming sessions and collaborative Git workflows (pull requests, branches) to keep quality up and share what I was learning.
- Took part in weekly sprints, stand-ups and retrospectives, which taught me a lot about shipping things in small steps instead of waiting for everything to be perfect.

Tech Stack: HTML5, CSS3, JavaScript (ES6+), Responsive Design, Git, GitHub, Agile/Scrum

Keywords Studios

GBTN Member (Gaming & Tech Network)

08/2020 – Present | Remote

- Active member of a global gaming and tech community where I network with professionals in game development and software engineering.
- Participate in discussions and events around game design, player experience and new technologies.

★ SELECTED PROJECTS

Noctis Aenigmata (Night's Enigmas)

Dark Situational Puzzles Game

Noctis Aenigmata (from Latin: "Night's Enigmas") is a small Flutter mobile game inspired by short horror stories and designed for 2 or more players.

The game is simple in structure but meant to create the right kind of tension: one player chooses a puzzle and reads the hidden answer, while the others try to reconstruct what happened by asking yes/no questions until they feel ready to give a full explanation.

Puzzle content is loaded from JSON files to make it easier to expand.

The app currently supports Italian and English. I structured it so more languages could be easily added later. Categories are managed through structured navigation and the UI uses a custom dark theme with gradients, animated effects, and layouts that adapt to different screen sizes.

Puzzle solutions are shown through a dedicated reveal dialog.

The project is still in progress. I still need to improve the interface and finish more puzzle content, but that is also part of what makes it meaningful to me: it is something personal, evolving and built with a real person in mind rather than as just another portfolio piece.

GitHub: https://github.com/Satik37/noctis_aenigmata

Tech Stack: Flutter, Dart, JSON

Personal Portfolio

satik37.github.io

This is my personal developer portfolio, currently being rebuilt from scratch with React, Vite, and the all-new version of Tailwind CSS (v4).

I'm using this project to get more comfortable with modern frontend tooling and to experiment with layout and visual design.

It is a work in progress, deployed on GitHub Pages and updated regularly as I keep building.

Live: satik37.github.io 

Tech stack: React, Vite, Tailwind CSS v4, JavaScript, GitHub Pages

EDUCATION

Bachelor's Degree in Nursing Science (Incomplete)

Università degli studi di Perugia

2016 – 2020 | Perugia, Italy

Transferable skills: managing stress in high-pressure environments, communicating clearly with colleagues and end-users in very different emotional states, working in multidisciplinary teams, solving problems quickly when there is no time to waste, and working with complex information systems under pressure.

BLS-D Certification for Healthcare Professionals

Università degli studi di Perugia - Italian Resuscitation Council (IRC) - 2019

Scientific High School Diploma

Liceo Scientifico G. Galilei

2014 | Perugia, Italy

Liceo Scientifico G.Galilei - Perugia, Italy - 2014

HOBBIES & INTERESTS

- Miniature painting and static modelling (precision and detail-oriented work)
- Gaming and game design, with strong interest in game mechanics and player experience
